

6. Care of Leather

The leather harness and lead issued by GDTx should give many years of service if properly cared for. The following are a few tips for the care of leather equipment:

- If the leather equipment gets dirty, clean with a cloth and soapy water.
- Never dry leather equipment by placing it on a hot surface, as the leather will crack.
- After drying naturally, rub some saddle soap into the leather. This will keep it supple.
- Your equipment has been treated with a leather waterproofing agent, but reapplying a new waterproofing coat once a year will benefit.
